

US Army Transportation Corps

Mission

The Transportation Corps provides the full range of Army transportation services and support essential for CONUS-based and forward-deployed power projection forces across the operational spectrum in support of the National Military Strategy.

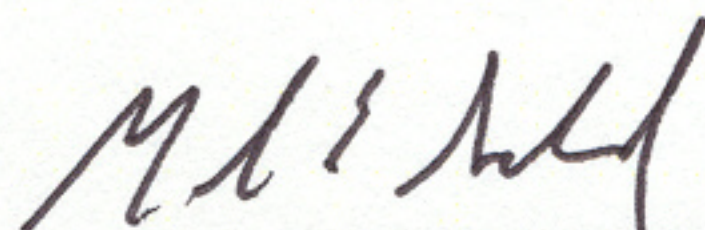

Core Competencies

- Deploy the Army in force projection operations.
- Synchronize the use of all modes of transportation and serve as the Army's single transportation movement controller and traffic manager.
- Provide the Army's component for the joint and combined transportation network.
- Conduct multi-model, common-user land and water-based transportation operations.
- Conduct cargo transfer operations at fixed ports, air and inland terminals, on surface ships and across bare beaches.
- Train and provide Transportation Corps Soldiers and civilians to meet Army requirements.
- Provide worldwide single port management, transportation and traffic management services; deployment planning and engineering while integrating 21st Century technologies.

Strategic Vision

The Transportation Corps is transforming with the Army, enabling it to move into the 21st Century. Our focus, on reconciling the requirements of the interim and objective forces for strategic deployment and operational maneuver, mandates a Corps which has the inherent qualities, skills and capabilities to meet the Chief of Staff of the Army's goal to provide rapidly responsive, agile and expeditionary forces within the first 15 days of an operation.

Moreover, leadership, training and organization at every force level will ensure that our Army can distribute and move the forces and materiel required by Army combat units. Our people are the key to distribution and are movements experts--We are the Transportation Corps; The Spearhead of Logistics!

MARK E. SCHEID
Brigadier General, USA
Chief of Transportation
